1 About this document

1.1 Revision history

Version	Date	Changes
.01	2013-06-19	First edition

1.2 Before you start

Validity

This document applies to the following product:

Name	Type (ASN)	Version
IVP EHP application	POL63x.00	v3.02.xx

This document is a supplement to the general integration guide for Climatix Modbus communication, slave mode.

That document must be read first and all general information such as document conventions, important information on safety, trademarks, copyright etc. are valid for this document as well.

This document only contains the unique information for the product mentioned above. All general engineering information such as mounting modules, communication settings etc. are described in the integration guide.

Prerequisite

User has read the general Modbus integration guide for Climatix, CB1J3960en.

1.3 Reference documents

Further information

The following documents contain additional information on the products described in this manual:

Document	Order no.
Data sheet "Communication module Modbus"	CB1Q3934en
Basic documentation "Modbus communication module"	CB1P3934en
Integration Guide "Modbus communication, slave mode"	CB1J3960en

2 Application

2.1 General information

What are standard applications?

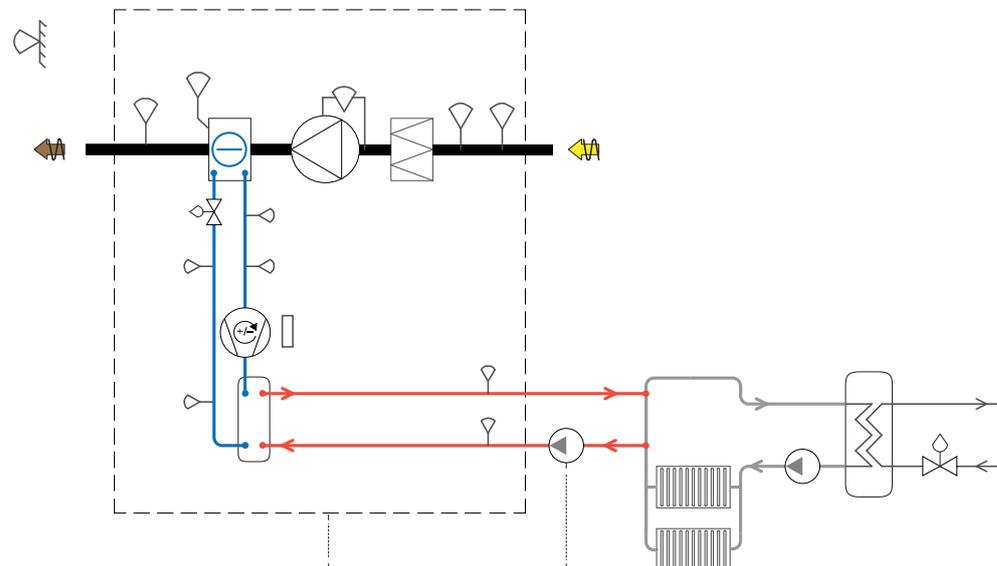

Standard applications for Climatix comprise predefined monitoring and control functions for a particular plant type.

Features:

- OEM customers receive standard applications as a set of loadable files. They can be loaded in the controller via SD card.
- An HMI operator unit allows for assigning inputs and outputs to the respective plant as well as select, configure and parameterize the required functions.

Standard application EHP v3.02.xx

Standard application EHP v3.02.xx is available at this time. It contains all common functions to control and monitor air conditioning units (**Extract Heat Pump**). The following diagram provides an overview of selectable measured values and control equipment:

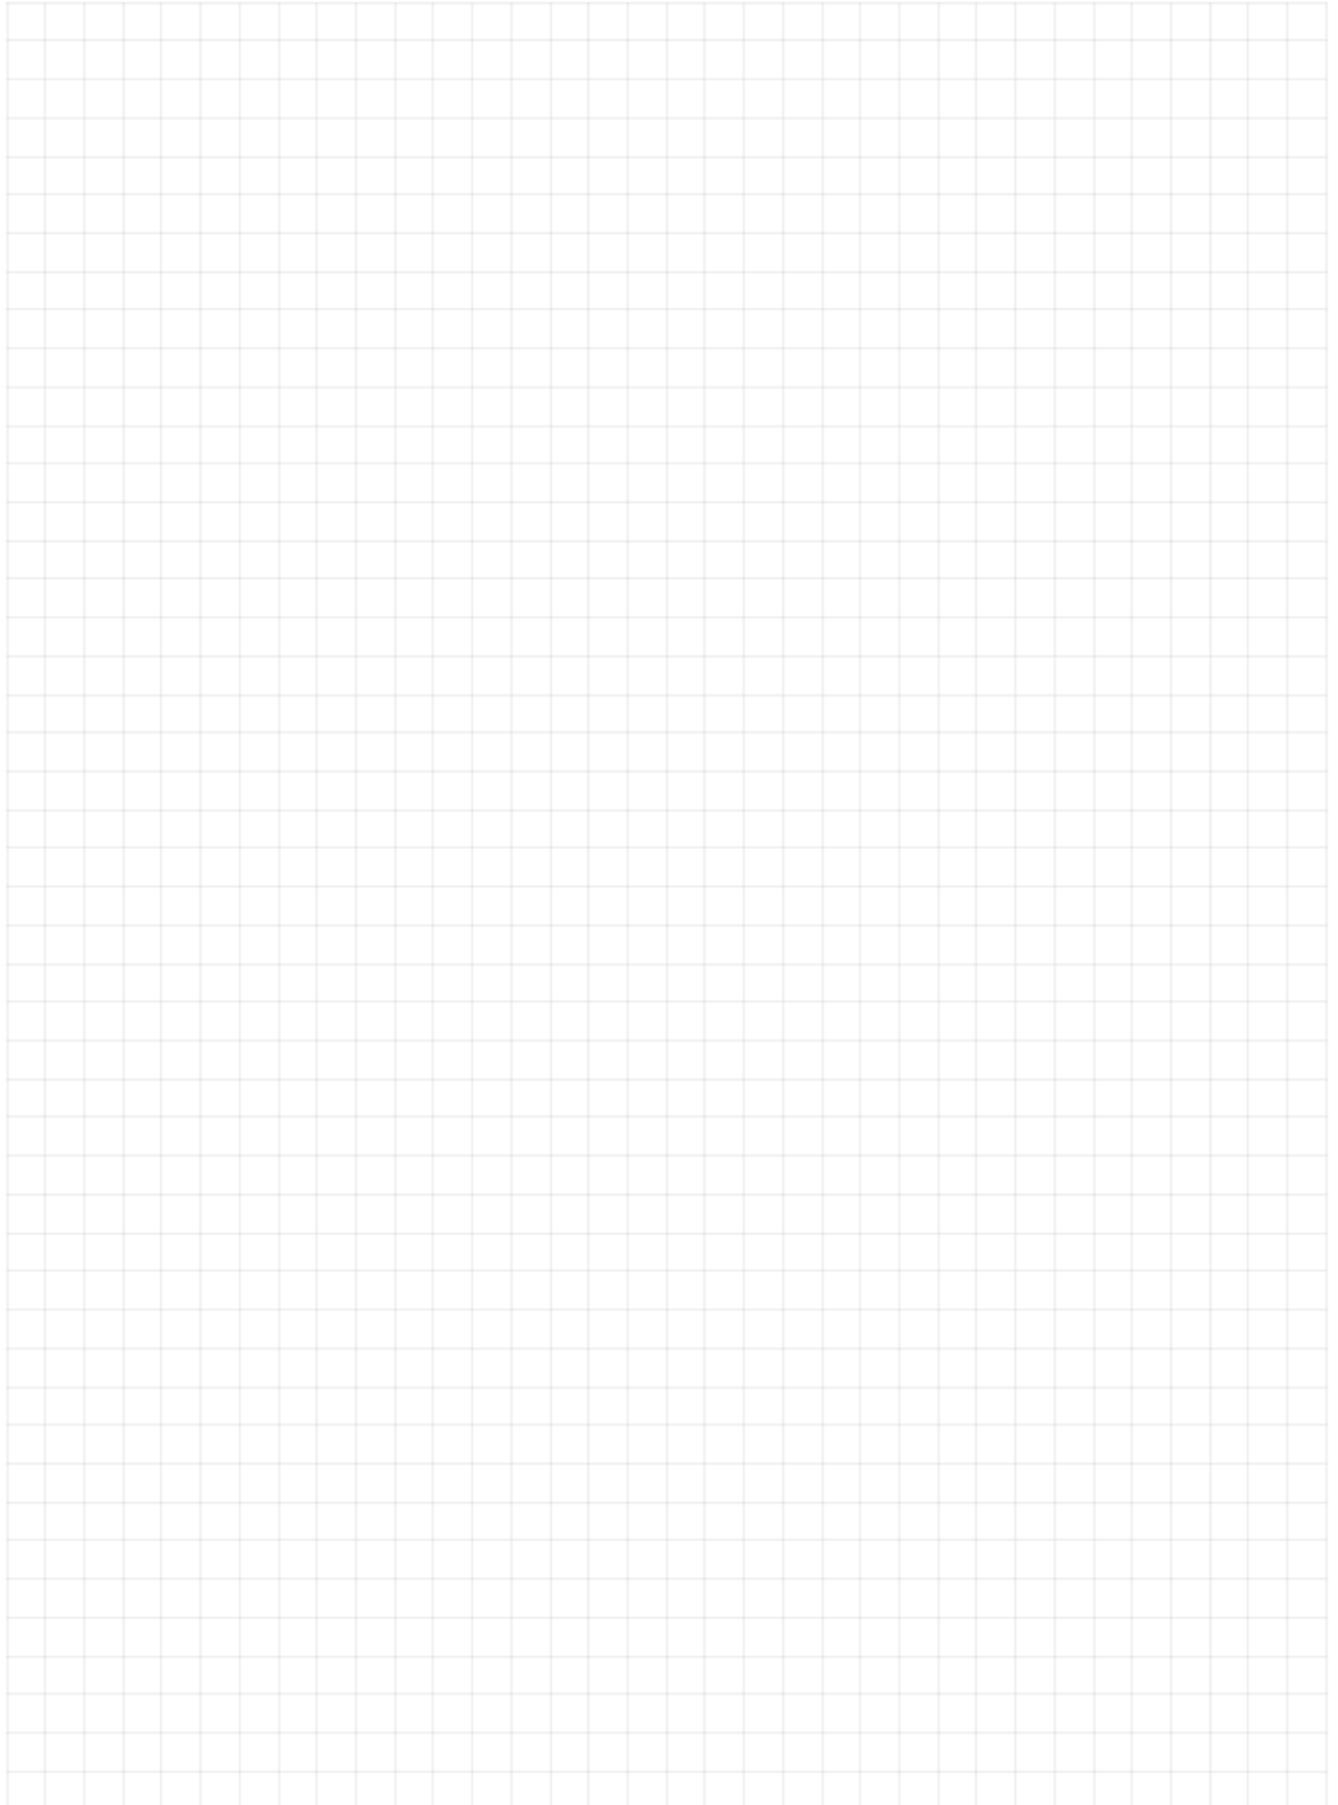

Detailed information -

Modbus registers

The set of loadable files mentioned above also includes a mapping file for integration in a higher building automation and control system via communications module. The Climatix controller automatically assumes the Modbus registers required for integration as per the plant data points and functions configured and parameterized previously.

The following tables list the predefined Modbus registers supporting standard application EHP v3.02.xx to ensure standardized and simple integration.

3 Reference Modbus addresses

3.1 General

Purpose

This section describes the reference addresses used in the specific application, see chapter 1.2 "Before you start".

Modbus data formats

Modbus type	Description	Reference	Datatype
Coil status	Read/Write Discrete output	0x	1bit
Input states	Read Discrete input	1x	1bit
Input register	Read Input register	3x	16bit signed or unsigned word
Holding register	Read/Write Output register	4x	16bit signed or unsigned word

Addresses used

All reference addresses from 0001-0125 for on-board and -1000 for module are generated and can be accessed even if not listed. As a result, multiple coils/registers can be forced/reset even if there is a gap between two reference addresses.

Do not read/write any addresses above 0125/1000. Doing so causes an exception and communication fails.

All address types starts with 1, and due to that some Master devices starts with 0 it's in that case necessary to subtract all addresses in this document with 1.

Presentation

Values and states are presented as follows:

- 16 bit real values are presented in their actual value/unit. E.g. °C, %, Pa, l/s (Normally Signed Word).
- 16 bit states are presented as a number, see the reference address description (Unsigned Word). Texts for each state are represented in the last column separated with * (Example *Off*On = 0=Off and 1=On*)
- 1 bit status are presented as 0=Off and 1=On.
- 1 bit alarms are presented as 0=Normal and 1=Alarm.

Alarms and status are presented both as input states and as input registers.

Examples

A real value is 215, and presented by a 16 bit register binary as:
MSB 11010111 LSB.

The 16 bit register "BMS override time program" is used and set binary to state 6:
MSB 00000110 LSB.

Decimals

When Modbus uses a 16 bit register to handle real values, a factor is needed for decimals. E.g. factor 10 for 1 decimal, factor 100 for 2 decimals, etc.

Example 1: Present values

The present supply air temperature is 20.6 °C and is multiplied by 10 in the Climatix controller. It is presented as 206 at Modbus and must be divided by 10 in the master device to return to 20.6 °C.

Example 2: Setpoints

To set the temperature setpoint 21.5°C at the master device, multiply it by 10 to present it as 215 at Modbus. The Climatix controller then divides by 10 to return to 21.5 °C.

Override I/Os

Inputs that are possible to override via Modbus is marked with (I/O), these must first be setup to be overridden via communication, see Integration guide.

3.2 Coil status

Table of coil states

Address	Description	Values /Units	Remarks
Present value			
0x0001	Alarm acknowledge	0-1	Off*On
0x0002	Enable communicationtest	0-1	No*Yes
0x0003	Communicationtest puls	0-1	0*1
0x0004	Fire damper test	0-1	Passive*Active
0x0007	Energymeeter reset partial	0-1	Passive*Active
Tracking value			
0x0011	Emergency stop input	0-1	Off*On, (I/O)
0x0012	External control input 1	0-1	Off*On, (I/O)
0x0013	External control input 2	0-1	Off*On, (I/O)
0x0014	Summer/Winter changeover input	0-1	Winter*Summer, (I/O)
0x0015	Fire alarm input	0-1	OK*Alarm, (I/O)

3.3 Input states

Table of input states

Address	Description	Values /Units	Remarks
Present value			
1x0001	Alarm class Danger alarm (A) status	0-1	Normal*Alarm
1x0002	Alarm class Critical alarm (A) status	0-1	Normal*Alarm
1x0003	Alarm class Low alarm (B) status	0-1	Normal*Alarm
1x0004	Alarm class Warning alarm (C) status	0-1	Normal*Alarm
1x0005	Manual mode	0-1	Auto*Manual
1x0006	Communicationtest puls	0-1	0*1
1x0011	Emergency stop input	0-1	Off*On
1x0012	External control input 1	0-1	Off*On
1x0013	External control input 2	0-1	Off*On
1x0014	Summer/Winter changeover input	0-1	Winter*Summer
1x0015	Auxiliary input	0-1	Off*On
Alarm value			
1x0016	Outside air damper feedback	0-1	OK*Alarm
1x0017	Extract air damper feedback	0-1	OK*Alarm
1x0018	Fire damper closed	0-1	OK*Alarm
1x0019	Fire damper opened	0-1	OK*Alarm
1x0020	Fire damper no move	0-1	OK*Alarm
1x0021	Fan alarm	0-1	OK*Alarm
1x0022	Exhaust fan alarm	0-1	OK*Alarm
1x0023	Exhaust fan feedback	0-1	OK*Alarm
1x0024	Exhaust fan deviation alarm	0-1	OK*Alarm
